

ChipNet3 Point of Sale Options for the Corporate Campus

Description

As well as providing a range of powerful mini-tills that can replace conventional cash registers in a store or cafeteria environment, Infineer have also developed an interface to major brand Point-of-Sale stations to facilitate cashless payment for meals and other items.

Cashless applications are ideal for operators of campus stores. By using the card, operators are saved the cost and inconvenience of handling cash whilst gaining the advantage of full transaction recording. Infineer can supply a wide range of POS options to suit every need, from cost effective and robust dedicated smartcard units through interfaces with high specification commercial POS systems.

Point of Sale Options...

The customer can choose from a range of Point of Sale devices and choose a system that fully meets their operational and budget considerations. The customer can choose to use the same POS throughout or can mix and match as necessary. The customer can rely on the fact that all systems are properly integrated and provide full functionality.

The options described in the following pages include...

- The Infineer 8650 TCP/IP ChipNet Point of Sale, custom designed to provide the most flexibility with ChipNet3
- The fully integrated Uniwell range of high specification POS devices for customers who require access to large numbers of pricelines
- The single priceline Infineer 8653 Micro POS, ideal for libraries and other small outlets

The Infineer 8650 TCP/IP ChipNet Point of Sale

The Infineer 8650 TCP/IP ChipNet Point of Sale – A purpose built ChipNet terminal designed to interface with commercially available customer displays, cash drawers and receipt printers. The 8650 Terminal offers unrivalled performance at a price, which is hard to beat.

The 8650 Terminal is fully compatible with ChipNet features such as ACM and dynamic purses. The 8650 Terminal can even selectively authorise which purse can be used to buy which individual PLU items. This is ideal for an establishment where a subsidy can only be used to buy specific items.

Uniwell SX700 Range

The SX700 Uniwell Range – Top of the range POS systems from the worlds leading supplier. Fully integrated with the Infineer 8652 TCP/IP Payment Terminal. All the power and sophistication of Uniwell with the 8652 Terminal providing full ChipNet features such as ACM and dynamic purse compatibility.

Uniwell TX870 Range

The TX870 Uniwell Range for customers who want the ease of operation offered by a touchscreen solution. Designed to meet the most stringent market requirements. The TX870 takes advantage of ROM based technology to provide a POS solution that is more cost effective and stable than the equivalent PC based POS solution. Once again the 8652 Payment Terminal, used in conjunction with the TX870, provides full ChipNet features such as ACM and dynamic purse compatibility.

The Infineer 8653 Single Priceline Micro POS

Ideally suited to libraries and stationary stores where the administrator would like a quick and simple way of charging students for consumables or library fines etc.

Transactions are recorded against a single priceline but reports for this priceline can be recorded against individual terminals or groups of terminals. The 8650 Terminal is fully compatible with ChipNet features such as ACM.

ChipNet3 – Putting Smartcards to Work!
