

## Introducing the ChipNet3 Value Plan!

### Description

ChipNet3's powerful Value Plan feature provides the administrator with the tools needed to create and manage dynamic value purses for specific applications such as book allowances and other services where you wish to exercise control over the use of funds.

### Service Timetable

A unique, fully configurable Service Timetable is created for each Value Plan, which contains details of valid time periods, POS devices and other information necessary to manage the plan effectively. Any number of Value Plans can then be created for your site and allocated to cardholders on an individual basis.

#### **Value Plan features include...**

- Central allowance fund – Cash paid in is kept in a centrally administered allowance fund.
- Automatic replacement of funds – Allocate a subsidy that automatically refreshes its self at the end of each day
- Automatic allocation of funds – Allocate a fixed subsidy each day which adds to funds remaining in the cardholders purse

Using the service timetable tools, the administrator can configure which POS devices will accept the Value Plan. Examples of the practical use of the Value Plan feature are as follows:

**Example 1.** A university may allow parents to pay money into a fund to buy textbooks. This fund would be held by the administrator who can use the Value Plan tools to ensure that the fund can only be accessed at certain times of the day in the campus bookstore.

**Example 2.** If a member of staff has to bring important guests to your cafeteria, the administrator can grant the staff member a temporary Value Plan for that meal period with sufficient funds to cover the cost safe in the knowledge that ChipNet is recording every transaction.

## ***Fully Flexible***

The powerful configuration features of Chipnet3 allow you to set up your timetables as far into the future as you wish to go, deleting and extending date ranges as required.

The value plan is a dynamic feature of ChipNet3 and requires an Ethernet connection between participating POS terminals and the ChipNet core. ChipNet also features two on-card purses, one for personal cash and the second one a configurable control purse that can be used for other applications.

## ***Features***

- Unlimited value plans
- Fully configurable time periods
- Powerful maintenance tools
- Simple intuitive interface
- Multiple Purses
- Tools for visitor hospitality
- Comprehensive management reports
- Customized reports available
