

7650 Vending Terminal

Description

The Infineer 7650 Vending Terminal is a simple and effective way of providing an alternative to the use of coins to make purchases from your fleet of automatic vending machines.

The compact and stylish 7650 can be interfaced to most vending machines and is designed to support both Executive A and Multi-Drop Bus (MDB) protocol. Where Level II of the MDB cashless payment protocol has been implemented at MDB machines, the 7650 terminal can also be used to revalue cards.

Your ChipNet3 dealer will be pleased to give you advice with relation to specific vending machines and show you how you can get the maximum benefit from the use of the Infineer 7650 and ChipNet3. A full installation and support service is also available.

You can also restrict the terminal to accept purchases from the "cash" purse only, or offer the choice of using the special features of the ChipNet Discount, Subsidy and Allowance purses. For example, free drinks or discounts may be offered at a particular time of the day or day of the week.

The 7650 terminals support TCP/IP network communications permitting robust real-time audit reporting and integration with existing LAN/WAN architectures and in addition, on-screen audits are available at the terminal which allow the administrator to view:

- Total Number of Customers
- Total Cash Debited
- Total Cash debited by Purse type
- Total Revaluations (where implemented)

The Infineer 7650 is EVA compliant with dimensions: External 96x96x60 mm, Internal 92x92x60. The terminal is also Compatible with VMC Standard Power Output
