

## 8652 Payment Terminal

### Description

The Infineer 8652 terminal will operate as a payment device in conjunction with any 3<sup>rd</sup> party software or hardware that supports serial communication. Infineer can supply a simple serial protocol, under the terms of a confidentiality agreement that will allow developers to harness the power of ChipNet to their own applications. For example...

**Point of Sale** – Integrate ChipNet as a cashless payment tool for your Point of Sale system. PC based or ROM based as long as your device can be programmed to communicate using the Infineer protocol your Point of Sale supplier can integrate ChipNet quickly and efficiently.

**Payment of Library Fines** – For libraries using ChipNet to pay for the use of reprographic services you could use the same card to pay library fines by integrating the 8652 with your library management software.

Integration with 3<sup>rd</sup> Party Software – ChipNet can also be integrated with specialist 3<sup>rd</sup> party software such as Pcounter and Pharos network print software etc. by using the 8652 terminal as a payment device.. The potential is endless!

You can restrict the terminal to accept purchases from the “cash” purse only, or offer the choice of using the special features of the ChipNet3 Discount, Subsidy and Allowance.

ChipNet can also be configured to include transactions recorded at the terminal in a range of standard reports.

Talk to your ChipNet supplier and explore the full potential of integration today.
