

## Rechargeable Card

### Description

The Infineer rechargeable thin magnetic stripe card is identical to the Infineer disposable thin magnetic stripe card in shape and size and are supplied with the standard design shown above

Cards can be quickly and easily recharged at an Infineer Card Centres or the administrator can revalue the cards using the special menu functions of the Infineer 6255 Copy Vending or 8206 POS terminals. This method requires an authorised member of staff who will revalue the card according to the amount of money tendered to them by the user and access to the revaluation menu requires a special administration card.

If required, a limit of 20 or 40 revaluations can be set at the terminals, typically to guarantee continued income generation through new card sales. Alternatively the terminal can be configured to accept an unlimited number of revaluations.

When ordering rechargeable thin magnetic stripe cards, customers will be asked to stipulate the cash or copy (unit) value they wish to have encoded on the cards. In addition to any customized printing requirement, they are also invited to specify a print line to be printed on the reverse of the card (up to a maximum of 30 characters including spaces).

- Magnetic Stripe Card (2750 Oersted Magnetic Coercivity)
- JIS Encoding Format (not ISO Standard)
- 26 Microns Thick - PVC

### Examples

**Public and Educational Libraries** – Use the card in conjunction with the Infineer 6255 Copy Vending Terminal to pay for photocopies. Libraries can also recover the cost of printing by using the card with Infineer's SmartPrint CENTRAL and Pcounter network print solution. Miscellaneous items and library fines may also be paid for using the card at an Infineer 8206 POS Terminal.

**Factories** – Use the card as a simple and quick way to pay for drinks from a vending machine fitted with the Infineer 7250 Vending Terminal

**EasyCard the simple way to pay!**
