

7250 Vending Terminal

Description

The Infineer 7250 operates with EasyCard disposable and rechargeable thin magnetic stripe cards. The terminal has been designed to replace or complement the coin mechanism or note validator in most vending machines.

The systems provide an ideal way of removing cash from the vending and catering service and have an application in school, leisure and commercial environments.

Once installed in the vending machine, the 7250 facilitates cashless payment for drinks and snacks.

The standard 7250 terminal accommodates both Executive Mars Protocol A and Multi-Drop Bus protocols. In Executive machines, the Infineer 7250 is simply connected directly to the Vending Machine Controller in place of a coin mechanism or note validator. The Multi-Drop Bus protocol facilitates use of the card terminal in conjunction with coin mechanisms and note validators.

The terminal has up to 95 pricelines and also offers a multi-vend option. The audit information available details the total amount sold by priceline and is available on-screen.

Cut Out Template Mounting Requirements – 115 (H) x 85.5 (W) Hole required for insertion into vending machine

Power Supply Requirements – 24V AC / 34V DC from Vending Machine
