

8206 Value Loader & Mini Point of Sale Terminal

Description

The 8206 Value Loader & Mini Point of Sale Terminal is often used in libraries and educational establishments if a customer does not wish to have the same initial value pre-programmed on all cards. Instead they can use the 8206 unit to encode the initial value onto a card on an individual basis. The unit can also be used to revalue rechargeable cards and as a mini-till.

The 8206 unit will accept both EasyCard disposable and rechargeable thin magnetic stripe cards.

Instead of purchasing a pre-programmed card from a dispenser, for example, the user may present a sum of money to the 8206 operator and that value is encoded onto the card.

Alternatively a site administrator may wish to make an advance purchase of a large number of cards carrying no value and encode them on-site in batches of different values as and when they are required.

The Infineer 8206 can also be used as a mini Point of Sale device, for example to deduct fines in a library or pay for stationery items in a school stationery store. The terminal has 18 PLUs, 18 Hotkeys and 4 Sales Departments. It also has a tax facility to accommodate the requirement to apply sales tax.

The terminal can be mounted with a Star Micronics receipt printer on a custom Infineer base plate, which neatly conceals the connection and power cables.
