

SmartPrint CENTRAL Software (SL020)

Functional Overview

SmartPrint CENTRAL software charges users for prints taken across a network. It is typically implemented on sites that have a very large number of PCs generating print jobs.

SmartPrint CENTRAL is the best value print release solution on the market today and combines a sophisticated printer release software package and an Infineer 6255 Payment Terminal to provide a dedicated print release station.

The user logs on at any PC and sends the print job across the network to the printer. In order to have the print job printed, the user must physically go to the print release PC, which would typically be located beside the printer. To select their print job from the print queue, the user either types in their User ID or selects it from a drop-down list. A dialogue screen appears showing the cost of the print job. At this point the user inserts a card for payment and, when payment has taken place, the job is printed.

The software accommodates multiple print queues / printers. If jobs are not printed a time delay before print job deletion can be specified. The software offers a full audit trail detailing the number of prints of each size per printer and total cash spent.

Smartprint CENTRAL can even be used in conjunction with another EasyCard photocopier controller to effectively ensure payment from prints or copies taken from the latest multi-function photocopiers that have a network print capability.

Specification

Print Release Station PC

- *Dedicated PC*
- *128 MB RAM*
- *5 GB Hard Disk Space*
- *PS2 Mouse*
- *1 x Serial / USB Port for PC Smartcard Reader*
- *Network Interface Card*

Operating Systems Supported

- *Windows 98*
- *Windows NT 4.0 Service Pack 6.0 (Workstation or Server)*
- *Windows 2000 Professional*
- *Windows 2000 Server*

Accessories

- 6255 EasyCard Payment Terminal

EasyCard the simple way to pay!
