

Infiner 310 Mini Point-of-Sale Terminal

Description

The Infiner 310 Mini POS has been designed as a smart and compact touchscreen terminal that works in conjunction with ChipNet3 software. The full colour LED displays are easy to use and navigate so training time is dramatically reduced. Operators can provide faster and more efficient customer service making the solution ideally suited to a busy school canteen or corporate cafeteria.

From the main display a further 8 configurable screens can be called up at the touch of a button. Each of these screens can be designated as a different department or division, i.e. desserts or drinks and can also store up to 49 PLU'S (Price Look-Ups) each.

As the terminal is fully integrated with the ChipNet3 System, they can talk directly to each other. Using the ChipNet3 software the administrator can set up the device remotely, configure hotkeys and manage the PLU list. Any changes that are made are fed down to the point of sale automatically. You can even configure each point of sale individually to suit different locations.

The 310 terminals support TCP/IP network communications permitting robust, real-time audit reporting and integration with existing LAN / WAN architectures.

The 310 can be restricted to deduct value from the ChipNet3 "cash" purse only. Alternatively it can be configured to use ChipNet3's "Purse 2" features including Discount, Subsidy or Allowances.

A full range of reports is available through which sales levels and use of the special ChipNet3 features will be clearly identified.
