

8650 Point of Sale Terminal

Description

The Infineer 8650 has been designed to provide a cost effective Point-of-Sale terminal for use in conjunction with ChipNet3 and is ideal for use in any food or retail outlet where reliability and customer throughput speed are essential.

The Infineer 8650 has 200 Price Look-Ups (PLUs) and 24 PLU Hotkeys and prices can be grouped in up to 20 Sales Departments. Up to 20 individual cashiers can also be identified.

The 8650 terminals support TCP/IP network communications permitting robust real-time audit reporting and integration with existing LAN/WAN architectures.

Using the ChipNet3 software the administrator can set up the device remotely, configure Hotkeys and manage the PLU list. Any changes that are made are fed down to the point of sale automatically. You can even configure each point of sale individually to suit different locations.

You can restrict the terminal to accept purchases from the "cash" purse only, or offer the choice of using the special features of the ChipNet3 Discount, Subsidy and Allowance purses as well as in conjunction with ChipNet3 Value and Meal Plans. You can even decide to restrict individual PLUs to cash purse payment. The Infineer 8650 has a built-in Add-to-Card facility to allow the operator the option to revalue cards and the terminal also supports split tendering (combined cash and card payment).

There is a comprehensive range of accessories available for the 8650 terminal including receipt printers, customer displays and cash drawers. All of these can be mounted on a single stand allowing the terminal and accessories to be moved easily.
