

Infineer 6002 coin controller for copiers

Functional Overview

Introducing the Infineer 6002, designed to offer a fast and efficient payment facility for copiers in public access areas. Available in a range of currency options, installation and maintenance is as simple as the operation of the device itself.

A scrolling LCD display allows the comprehensive user prompts to be easily read. These prompts can be displayed in up to 6 different languages. A series of menu options allows the operator to change pricing or view and print a full audit trail of the money taken. An override key is provided for staff photocopying or for the administration of any refunds.

The Infineer 6002 is compatible with the widest variety of makes and models of photocopiers, including both black and white and colour. With up to 8 different price lines available, it allows operators to charge separately for A4 black and white, A3 black and white, A4 colour and A3 colour. The Infineer 6002 also accepts up to 6 different types of coin denominations across a range of currencies.

For security purposes, a re-settable record of all transactions is available. The unit is freestanding and its large capacity cashbox means there is ample daily capacity for even the busiest environments. This makes the Infineer 6002 ideal for use in libraries, schools, universities as well as in commercial organisations and business centres.
