

## Pcounter Pro

### Integrated Cost Recovery for Professional Offices

#### Description

Infiineer's unique integrated approach to the management of reprographic resources allows our customers the option to account for usage against a range of user and project identifiers.

Infiineer's solution uses Pcounter software to manage print/copy accounts and our own range of powerful application terminals to control access to photocopiers and other reprographic equipment. Infiineer is a certified Pcounter reseller fully resourced and equipped to install and support projects of any size.

Pcounter is a network based software package (running on any Microsoft or Novell server) providing control of network printing and photocopiers, helping to eliminating waste and abuse. Pcounter monitors, reports on and is able to control: *Who* prints or copies; **What; Where; When and How Much.** Pcounter also includes a wide range of print and copy management capabilities including auditing, accounting, quota management, cost-control and cost-recovery options.

For professional organisation such as a **Law Firm, Architect or Engineering Office**, Cost Recovery is the key and the Infiineer solution allows professional offices of any size to allocate every copy made and print taken by User, Client and Project (Matter) codes. Fully integrated Infiineer Pcounter Pro photocopier control terminals can be connected over the Ethernet and, combined with the Pcounter print management tools, deliver the administrator, live, touch of a button reporting of resource usage.

Any administrator managing a network of PCs and access to print and copier resources who wishes to monitor departmental usage or recover costs through client billing, will find great benefit in using Pcounter. Monitoring and controlling who prints what, where, when and how much will result in a reduction in usage of consumables and can also provide significant cost savings by discouraging misuse of critical corporate resources.

With the integrated Infineer approach you can....

- Measure the total volume of copying and printing across your network, determining which users are printing and copying the most.
- Identify which resources are being under or over utilised. Enforce use of printers with the most appropriate capacity and use intelligent load balancing across similar devices
- Restrict and automatically delete duplicate print jobs
- Employing Pcounter Web Client: enables administration, client billing and balance queries via web interface
- Recover costs of printing and copying, either internally or externally, against User, Client and Project (Matter) codes.

## **Network Printing**

The following tools are available to allow you to control your ever-expanding network print traffic in the most efficient manner...

- Pcounter tracks & records all print activity per printer and per user.
- Who printed What, Where, When and How Much?
- Stop, pause, delay or re-schedule print jobs based on criteria such as copy/page count, job size/type, paper size, document type with an option to detect and automatically delete duplicate print jobs.
- Load-level printing for device optimisation and lowest cost output.
- Quota Management - Real-time enforcement stops printing when print credit is exhausted.
- Automated allocation of print quota on a scheduled basis to reduce administration – ideal for non-charging environments.
- Set costs per device, per paper size – with cost multipliers for colour and/or duplex usage.
- Print job confirmation for users – show cost and page count before print is released.
- Secure printing, controlled release + print from anywhere to anywhere
- Charge-back & Client-billing from any network PC including Windows, MAC and Unix clients

## **Integrated Copy Control**

The Infineer 6055 is a copy release terminal designed for connection to any make or model of network-enabled copier or modern multi-function device, providing the ultimate in flexibility and control for those organisations wishing to manage, control, monitor or charge-back against copies made.

In addition to the standard SMS key entry terminal, the Pcounter Pro Range includes: terminals that accommodate a range of proximity smartcards and magnetic swipe cards being used as Short-ID, where the log-in process can be reduced to the touch or swipe of a card. A new QWERTY terminal is also available for users unfamiliar or unwilling to deploy SMS style keypads.

**Check with your Infineer distributor for the full range of copier terminal options.**
