

Pcounter Pay2Print Value Loader

Description

Pcounter Value Load Stations have been designed to offer self-service Pcounter account revaluation. They are secure, robust, easy to install and simple to use with low maintenance demands.

The Value Loader Station Range offers six different configuration options: coin acceptance, coin acceptance with receipt printer, note acceptance, note acceptance with receipt printer, note and coin acceptance and note and coin acceptance with receipt printer.

The load station will allow Pcounter users with accounts on the system to add value to their online accounts. The user inputs their identification; the TCP/IP network to the load station will transmit username and password, via the SMS style keypad and the balance of the account. The user can then tender monies that will be credited to the user's online account. With the addition of a receipt printer a receipt of all monies tendered can be provided.

The load stations are housed in a secure 3mm thick steel cabinet protected by three 10-pin radial security locks.

Specification
